## FastLeads ... smooth shaped rope leads developed from the race course.

Sea Sure have introduced a new range of **FastLeads** which can be used for a variety of rope lead applications on both racing and cruising yachts.

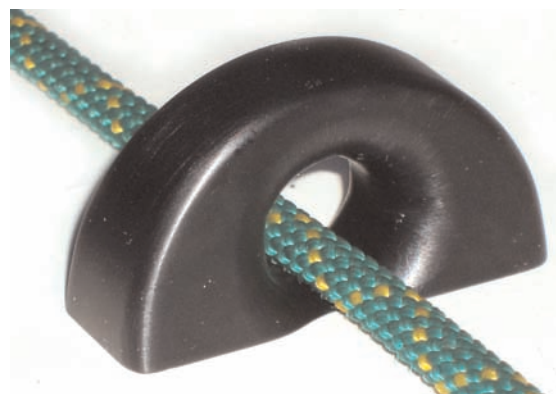

With the increasing use of advanced aramid ropes, **FastLeads** have been developed with smooth surfaces to offer a high strength 'all direction' lead.

Developed initially for TP52 race yachts and proven in action,

**FastLeads** can be used as high load rope tidys around the deck. With large eyes they are ideal for securing a floating block when required.

With smooth surfaces in all directions **FastLeads** will not chafe control lines or halyards. Produced from precision CNC machined aircraft grade aluminium and with a highly polished PTFE impregnated finish, there are no drill holes on the outer surface. They are secured through the base with machine screws for ultimate strength.

**FastLeads** are available in three versions, each with three sizes to suit ropes between 4mm and 18mm diameter. And of course the **FastLeads** can be used as a smart, secure lead fitted to the toe rail for mooring lines.

END.
